

# **Compact Internet-capable Environmental Monitor**

---

Darold Wobschall, Ph. D.  
Esensors Inc.  
Amherst NY

# Agenda

---

## Part A

- Describe smart environmental monitoring sensors

## Part B

- Describe networking with the IEEE 1451 transducer standard

## Part C

- Discuss applications of networked environmental monitors.

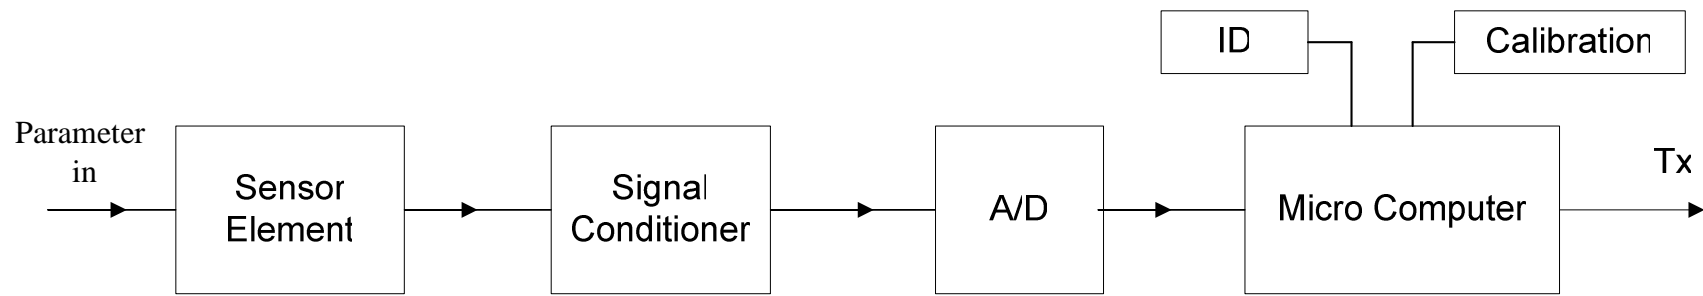

# Environmental Monitor (EVM) Sensors Suite (six function option)

---

- ❑ Temperature
- ❑ Humidity
- ❑ Illumination
- ❑ Carbon Dioxide (CO<sub>2</sub>)
- ❑ CO/VOC (Carbon monoxide and Volatile Organic Compounds)
- ❑ Atmospheric Pressure

# Part A

## Smart Sensor Block Diagram

SMART SENSOR

NETWORKED SMART SENSOR

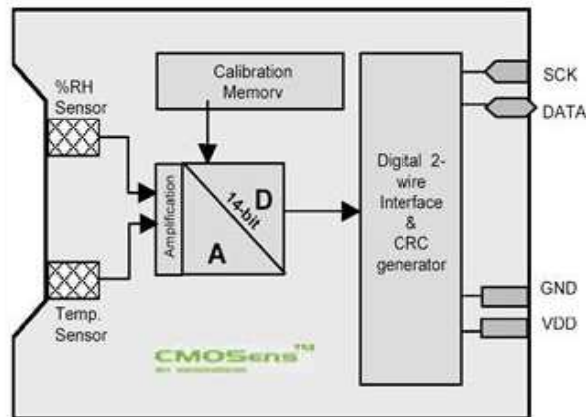

# Humidity/Temperature Sensor with digital output

**SHT1x / SHT7x**  
Humidity & Temperature Sensor

Parameter	Conditions	Min.	Typ.	Max.	Units
<b>Humidity</b>					
Resolution <sup>(2)</sup>		0.5	0.03	0.03	%RH
		8	12	12	bit
Repeatability			+0.1		%RH
Nonlinearity	raw data		±3		%RH
	linearized		<<1		%RH
Range		0		100	%RH
Response time	1/e (63%) slowly moving air		4		s
Hysteresis			±1		%RH
Long term stability	typical		< 1		%RH/yr
<b>Temperature</b>					
Resolution <sup>(2)</sup>		0.04	0.01	0.01	°C
		0.07	0.02	0.02	°F
		12	14	14	bit
Repeatability			±0.1		°C
			±0.2		°F
Range		-40		123.8	°C
		-40		254.9	°F
Response Time	1/e (63%)	5		30	s

**Block Diagram**

# Carbon Dioxide (IR) Sensor

---

- Infra-red (NIR) technology selected because of long-term reliability
- Alternative Technologies
  - Solid Electrolytic
  - Amperometric

# Infra-red Sensing Principle

- ❑ Some gases absorb light at particular IR wavelengths (CO<sub>2</sub> at 3 um)
- ❑  $I/I_0 = e^{-Ax}$  where  $I/I_0$  is light absorbed during transmission,  
x is path length and A is absorption coef. at specific wavelength
- ❑ Transmission filters select specific wavelength bands
- ❑ A is proportional to gas concentration
- ❑ IR sensors reproducible but not sensitive (need high conc or long paths)

# Infra-red Sensor Construction

## NDIR Gas Sensor

Acoustical detection an attractive option

# Response of IR sensor to Carbon Dioxide Gas

EVM with 1451

# Volatile Organic Compound (VOC) Sensor

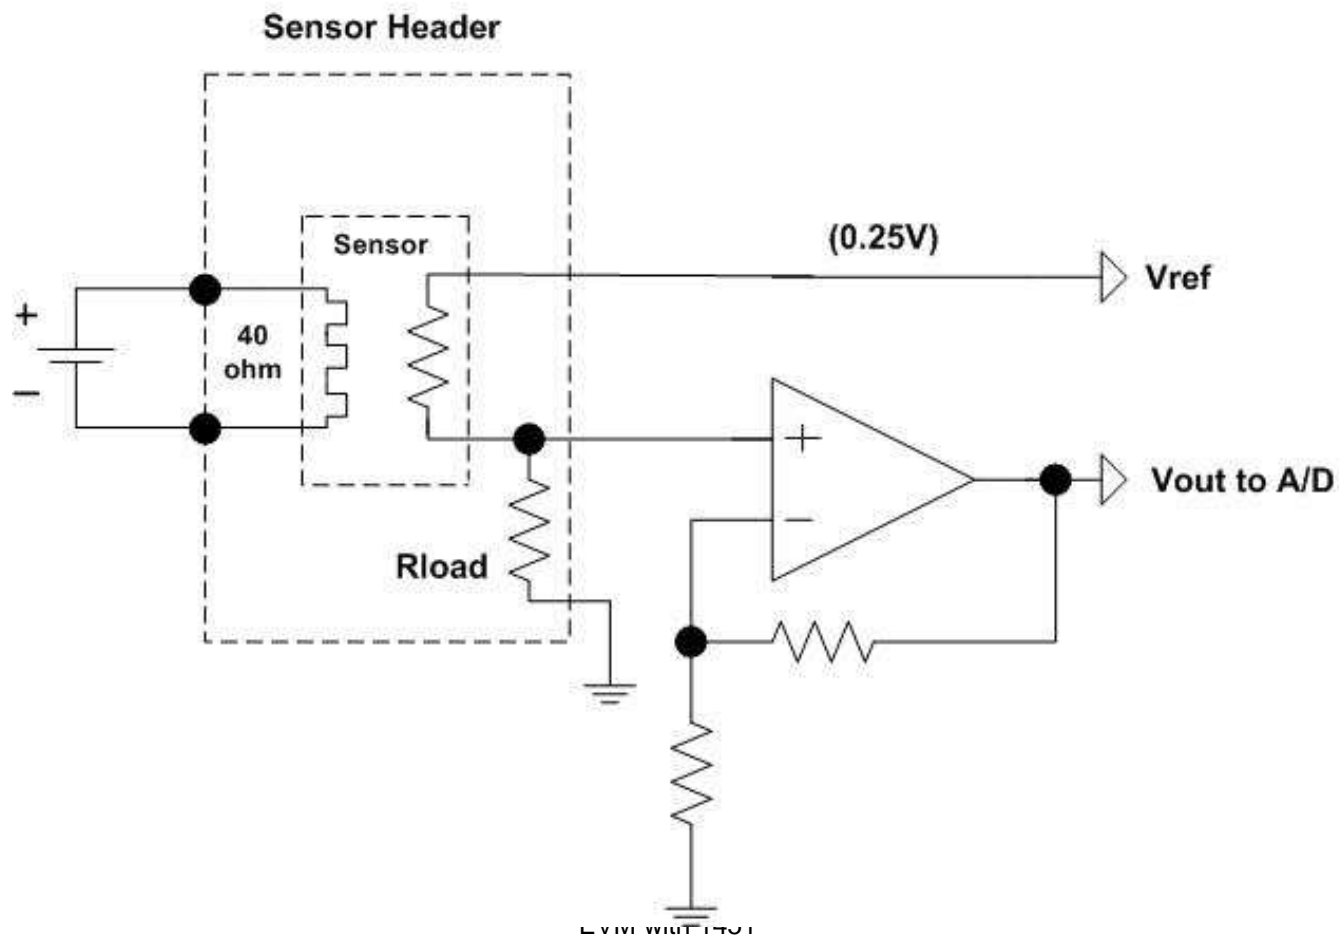

- ❑ Based on metal oxide semiconductors ( $\text{SnO}_2$ )
- ❑ Surface reaction with ambient gases when hot ( $350\text{-}500^\circ\text{C}$ )
- ❑ Heater (e.g.  $4\text{ V}$  @  $100\text{ mA}$ ) heats substrate
- ❑ Adsorbed gas reduces grain-boundary potential barrier and thus increases conductivity (decreases resistance)
- ❑ Delta-R is a function (approx. log or square root) of gas conc. (ppm)

as from with May 2000

# VOC Sensor Signal Conditioner

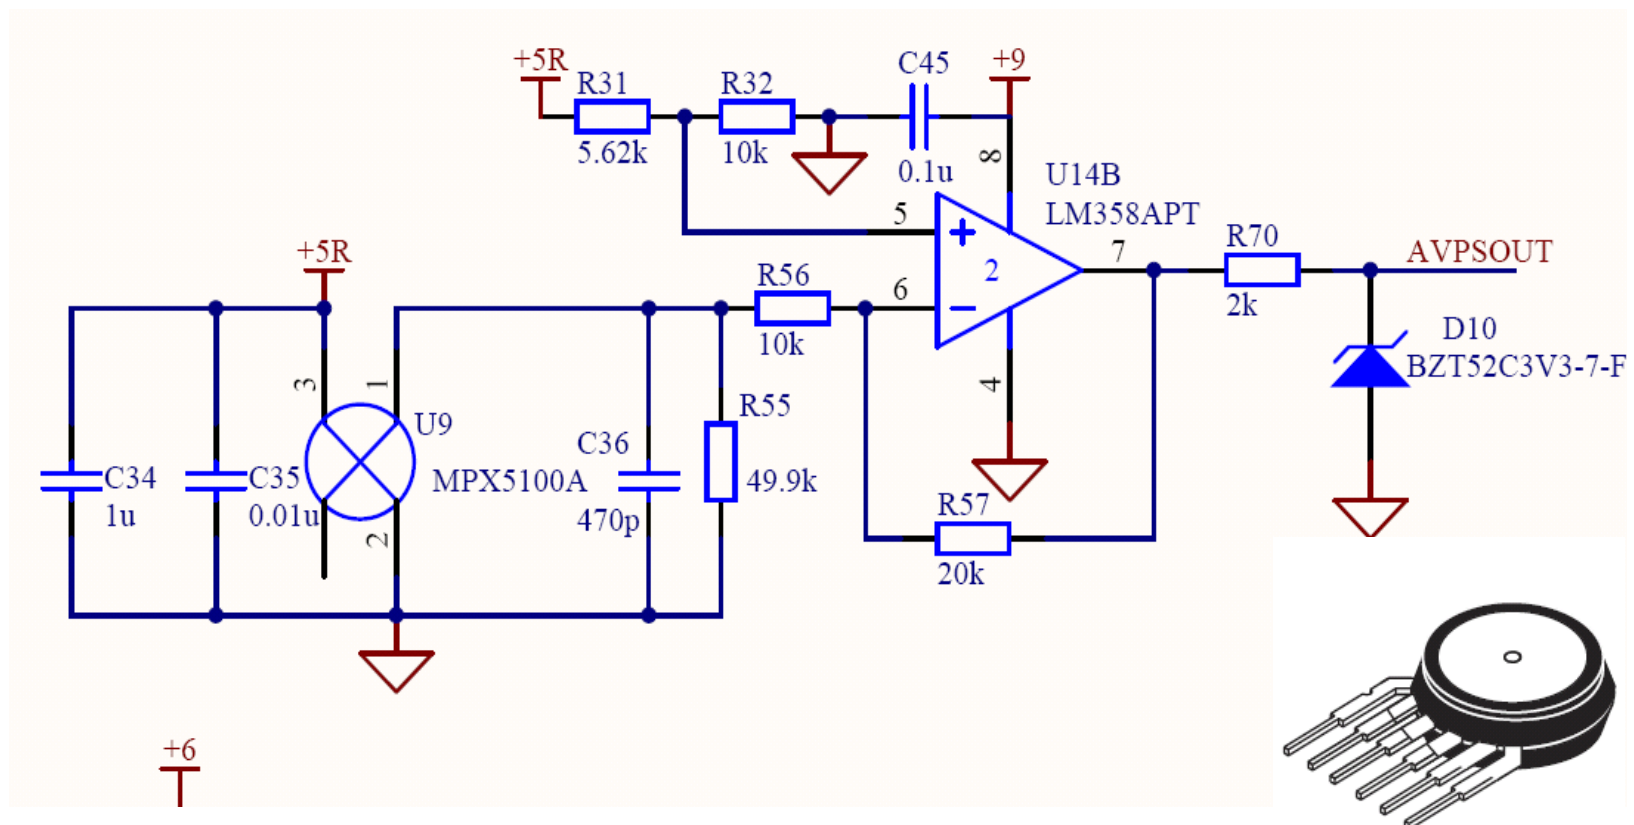

# Response of VOC sensor (MOS) to Acetone Vapor

# Pressure Sensor

- Absolute type (1 atmosphere or 760 Torr full scale)

# Response in Engineering Units (converted from raw sensor units)

## Sensor's Readings

 [Help](#)

This page contains sensor's data reading from POD. You can look up the sensor type table to map the correct sensors that POD connected to.

Chan#	Type	Current Data	Unit	W/N/C
1	VOC	54	PPM	<a href="#">Normal</a>
2	CO2	804	PPM	<a href="#">Normal</a>
3	H2	122	PPM	<a href="#">Normal</a>
4	CO2	805	PPM	<a href="#">Normal</a>

# Part B -Networking

## Features and Applications

---

### Features

- ❑ Plug and play
- ❑ Multiple sensors on one network or bus

### Applications

- ❑ Monitoring and Control
- ❑ Automatic testing
- ❑ Machine to Machine (M2M) sensor data communications
- ❑ Wide area (Nationwide) data collection

# Sensor/Transducer Networks

- ❑ A network connects more than one addressed sensor (or actuator) to a digital wired or wireless network
- ❑ Both network and sensor digital data protocols are needed
- ❑ Standard data networks can be used but are far from optimum
- ❑ Numerous (>100) incompatible sensor networks are currently in use – each speaking a different language

The Tower of Babel

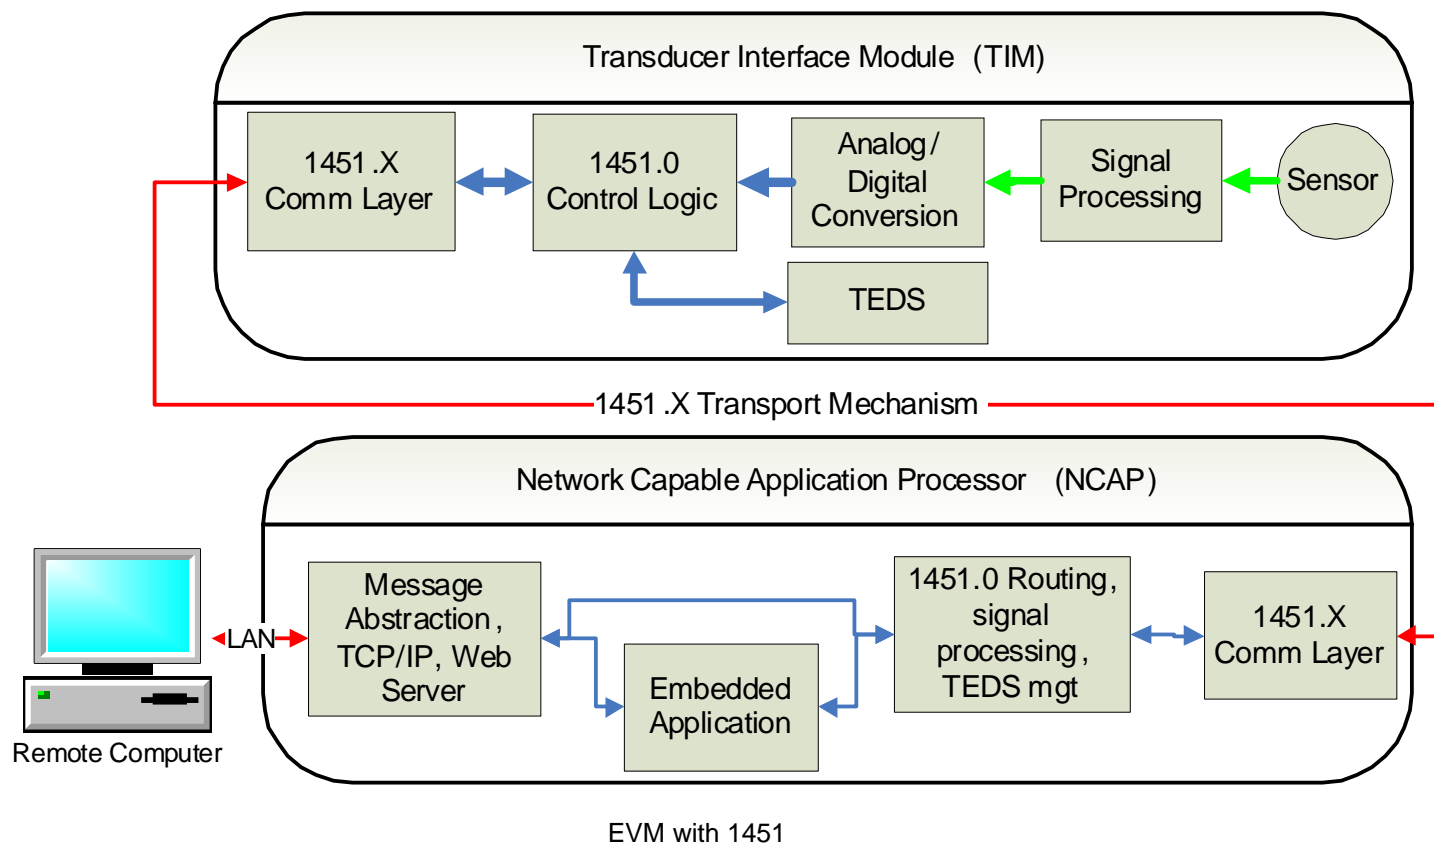

# IEEE 1451 – the Universal Transducer Language

---

- ❑ Problem: too many network protocols in common use
- ❑ Narrow solutions and borrowed protocols have not worked
- ❑ Sensor engineers in the fragmented sensor industry need a simple method of implementation
  
- ❑ *How can it be done?*
- ❑ We need something like USB, except for sensors
- ❑ Solution: the IEEE 1451 Smart Transducer Protocol open standard is the best universal solution
- ❑ Supported by NIST, IEEE and many Federal agencies

# A review of the IEEE 1451 Smart Transducer Concept

# IEEE 1451 Advantages

---

- ❑ Comprehensive enough to cover nearly all sensors and actuators in use today (not 20/80% approach)
- ❑ Many operating modes  
(buffered, no-buffer, grouped sensors, timestamps, timed data, streaming ...)
- ❑ Extensive units, linearization and calibration options
- ❑ Multiple timing and data block size constraints handled.
- ❑ Compatible with most wired and wireless sensor buses and networks (point-to-point, mesh, TIM-to-TIM, mixed networks).
- ❑ Efficient binary protocol (especially suitable for wireless)
- ❑ Standard is 400+ pages for basic part, over 1500 page total

# But the Complexity!

- ❑ A comprehensive standard is necessarily complex
- ❑ There was little adoption of the original IEEE 1451.2 (TII) standard because of its perceived complexity
- ❑ Manual preparation of the TEDS is not practical -- A TEDS compiler is needed
- ❑ A compliance test procedure is also desirable to prove that a design is correct

Munch –The scream

# Status of Various Parts of IEEE 1451

---

- |   |  |                      |
|---|--|----------------------|
| ❑ | <b>1451.0 – Basic data/TEDS format</b> | <b>Done (2007)</b>   |
| ❑ | 1451.1 – NCAP/Computer Interface       | Done (1999)*         |
| ❑ | 1451.2 – Serial (RS-232, etc)          | Being revised (1997) |
| ❑ | 1451.3 – Wired Multi-drop              | Done (2002)*         |
| ❑ | 1451.4 – TEDS Only                     | Done (2005)          |
| ❑ | 1451.5 – Wireless (WiFi, Zigbee, etc)  | Done (2007)          |
| ❑ | 1451.7 – RFID                          | Being ratified       |

\* Needs revision

# IEEE 1451.0 (Dot 0) TEDS Format

---

- Required TEDS [Memory block with defined format]
  - MetaTEDS
  - Channel TEDS
  - Calibration TEDS (unless SI units)
  - Xdr-name TEDS
  - Phy TEDS
  - Also optional TEDS
  
- Data Transmission [specific octet format]
  - TEDS/Status requests
  - Triggering and configuration
  - Sensor read commands and data return
  - Actuator write commands and data sending

# TEDS Format

---

- General format for each TEDS section (except Dot 4):

Field	Description	Data Type	Number of Bytes
-----	TEDS Length	UInt32	4 bytes
1 to N	Data Block	Variable	Variable
-----	Checksum	UInt16	2 bytes

- Binary TEDS Tuple format for each data block:

Type-Length-value (TLV)

Example: 01 02 A3 04

Field type is 1, Length is 2 bytes, field value is “A304” hex

- Field example: Meta-TEDS (TEDS # 1)

13: Number of Implemented Transducer Channels (default=1)

# Standard Transducer Units (binary format)

---

## SI Based Units

Base Quantity	Name	Unit Symbol
Length	meter	m
Mass	kilogram	kg
Time	second	s
Electric current	ampere	A
Thermodynamic temperature	Kelvin	K
Amount of substance	mole	mol
Luminous intensity	candela	cd

Field	Description	Data Type	Number of octets
1	Physical units interpretation	UInt8	1
2	$(2 * \text{<exponent of radians>}) + 128$	UInt8	1
3	$(2 * \text{<exponent of steradians>}) + 128$	UInt8	1
4	$(2 * \text{<exponent of meters>}) + 128$	UInt8	1
5	$(2 * \text{<exponent of kilograms>}) + 128$	UInt8	1
6	$(2 * \text{<exponent of seconds>}) + 128$	UInt8	1
7	$(2 * \text{<exponent of amperes>}) + 128$	UInt8	1
8	$(2 * \text{<exponent of kelvins>}) + 128$	UInt8	1
9	$(2 * \text{<exponent of moles>}) + 128$	UInt8	1
10	$(2 * \text{<exponent of candelas>}) + 128$	UInt8	1

# Dot 0 Command/Response Header

---

Byte Number	Description
1	Destination Transducer Channel Number (Most significant byte)
2	Destination Transducer Channel Number (Least significant byte)
3	Command Class
4	Command Function
5	Length (Most significant byte)
6	Length (Least significant byte)
7-N	Command dependent bytes

## NCAP Command Message Structure

Byte Number	Description
1	Success/Fail Flag
2	Length (Most significant byte)
3	Length (Least significant byte)
4-N	Reply dependent bytes

## TIM Reply Message Structure

# TEDS Compiler (Meta-TEDS section)

32 Matching Service Entries Displayed

Uses standard web browser (HTTP)

# Conversion to IEEE 1451.0 (Dot 0) Format

---

- ❑ Start with networked (Ethernet compatible) smart sensor -Combined TIM and NCAP
- ❑ Add TEDS
- ❑ Add HTTP Dot 0 commands interpretation
- ❑ Respond with data in Dot 0 format using HTTP
- ❑ Requires website which understands and displays Dot 0 format data
- ❑ Implement plug and play

# TEDS (Dot 0) for EVM Smart Sensor

---

- ❑ Meta-TEDS (for ID and overall configuration)
- ❑ Chan 1 (time) TEDS -- optional, but recommended
- ❑ Chan 2 (temperature) TEDS (+ calib TEDS)
- ❑ Chan 3 (humidity) TEDS (+ calib TEDS)
- ❑ Chan 4-6 (CO<sub>2</sub>, VOC, Press.)
- ❑ XdrcName TEDS – Name (e.g. furnace room) given by user
- ❑ GeoLoc (Location) TEDS -- optional

# Dot 0 Commands for EVM Sensor

## -- TEDS Related

---

- ❑ Tim Discovery --to see what is available
- ❑ Transducer discovery – to see what is available
- ❑ Read TEDS (read individually)
- ❑ Read Name TEDS
- ❑ Read Location TEDS (if available)
- ❑ Read Data (each channel individually or as a group)
- ❑ Other commands available but not implemented here

## STWS vs HTTP direct

---

- ❑ Smart Transducer Web Services translates Dot 0 commands and data via HTTP into network friendly SOAP ( Simple Object Access Protocol).
- ❑ STWS was developed at NIST (sponsor of 1451 protocol) – it is a version of the Dot 1 protocol which implements plug and play
- ❑ Other interfaces acceptable which are compatible with IEEE 1451.1 standard.

Temperature, humidity,  
illumination only [EM08]

EVM with 1451

Six function sensor suit  
(EVM) [EM09]

## Part C

# Environmental Monitoring Application Classes

---

- Building
  - Indoor air Quality
  - Energy usage (and control)
  - Lighting
  
- Industrial
  - *Above plus:*
  - Fire/smoke detection (fire alarms regulated)
  - Polluting gases (SO<sub>2</sub>, NO<sub>x</sub>)
  - Waste sites
  - Water quality

# Building Monitoring

## (indoor air quality)

---

- Occupant comfort
  - Temperature
  - Humidity
  - Illumination (lighting)
- Air quality (gases)
  - Carbon dioxide (CO<sub>2</sub>)
  - Carbon monoxide (CO)\*
  - Volatile Organic Compounds (VOC)\*
- Storage
  - Refrigerated
  - Controlled environment (e.g. art)

\*Safety

# Building Monitoring for minimizing energy usage

---

- Monitor/meter
  - Electrical energy consumption
  - Illumination (varies with weather conditions)
  - Cost of energy (via Internet)
  - [control – reduce lighting and shed loads as needed]
  
- Monitor occupancy
  - Carbon dioxide level in occupied rooms
  - [control – decrease ventilation if CO<sub>2</sub> level is low]

# Advantages of Internet-Capable Environmental Monitors

---

- ❑ Optimizes energy usage using information (e.g. current rates) from the Internet.
- ❑ Data from many buildings easily collected and complex analysis programs can be implemented
- ❑ Provides standard interfaces for monitors (sensors) and controls (actuators), thus facilitating transducer connection.
- ❑ Alerts to anywhere (email, cell phone) can be generated.
- ❑ Overall goals are to maximize efficiency and to minimize costs.

# Summary

---

- ❑ Described smart environmental monitoring sensors (6 functions)
- ❑ Described networking with the IEEE 1451 transducer standard
- ❑ Discussed applications of networked environmental monitors.

Demo version

Ruggedized version

# Photo of Sensor Pods

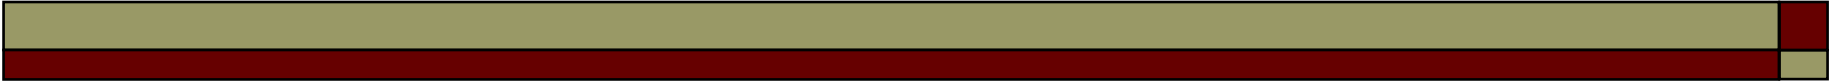

## Solid Electrolyte Gas Sensor

- ❑ Similar to semiconductor gas sensor but has voltage output
- ❑ Heater (5v @ 11.5 ohms)
- ❑ Has thermistor for temperature control
- ❑  $V_{sen}$  increases 50 mv per factor of 10 change in gas conc  
(220 to 490 mv at 350 ppm)
- ❑ Requires hi-Z amplifier
- ❑ Examples: Figaro TGS4160 ( $CO_2$ )  
or Oxygen (zerconia)
- ❑ Periodic re-zeroing desirable
